

# STEEL BANNER POLES WALL MOUNTED

## PRODUCT OVERVIEW

The wall mounted steel banner pole is an effective way of utilising space on your building whilst showcasing a permanent promotion, providing a significant presence from afar. The banner pole is often seen complimenting many large museums, public buildings, retail, business and leisure parks.

Designed for permanent use, our wall mounted banner poles, which can withstand wind speeds of up to 50mph, are manufactured with durability and longevity in mind.

All of our banner poles are manufactured by our experienced team here in the UK. We offer standard or executive poles which consist of a 60mm diameter steel pole, with capped ends and a galvanised finish.

The executive banner pole comes complete with straining arms designed to prevent the banner twisting and distorting in windy conditions.

We can also create a custom design banner pole depending on the colour, banner size, lighting and wind load guarantee you require.
